

NASA MATERIALS & PROCESSES WORKING GROUP COOPERATIVE EFFORTS NASA
WIDE AND WITH THE SPACE INDUSTRY

Yoseph Isaac-Cohen and Cheng L Isich
Jet Propulsion Laboratory, Caltech, Pasadena, CA 91109
Yosi@jpl.nasa.gov

in 1992, a NASA M&P Working Group (NMPWG) was formed to provide a platform for cooperation and collaboration among the various NASA Centers. Initially, NMPWG concentrated on the formation of NASA wide specifications using mature documents from individual NASA Centers. The NMPWG Standardization effort is now directed towards the adaptation of Non-Government Organizations (NGS) standards as well as the transfer of NASA's mature standards to become NGS documents. Since the Charter of the NMPWG is broad and covers all the technologies and science aspect of the space M&P field, the Working Group has an interest in a broad-base collaboration. To support the NMPWG activity, JPL created in 1994 a homepage and its URL address is <http://nasa-mp.jpl.nasa.gov/jpl-mp/homepage.htm> and this homepage has seen significant web-traffic. Further, JPL took initiative to publish a Newsletter named NASA M&P Update (NMPU) as a forum of information communication and technical interchange among the space M&P scientist and engineers. NMPU covers M&P space related activity and technical news from the various NASA Centers, the aerospace industry, standardization technical societies and other Non-NASA Organizations. The general activity of NMPWG, goals and areas of current and potential collaboration with NASA will be reviewed.
