

Proceedings of the 2003 NASA/JPL Workshop for Fundamental Physics in Space

TABLE OF CONTENTS

Chapter 1 Programmatic Talks

Workshop Organizers' Comments	Don Strayer, Ulf Israelsson, Lute Maleki Jet Propulsion Laboratory, Caltech	1-2
Status of the Fundamental Physics Program	Mark Lee NASA Headquarters	1-3
Fundamental Physics Program And the NSA Mission	Eugene Trinh NASA Headquarters	1-5
Fundamental Physics Changes in Response to Evolving NASA Needs	Ulf Israelsson Jet Propulsion Laboratory, Caltech	1-10
Updating the Fundamental Physics In Space Roadmap	Ulf Israelsson, Bill Klipstein, Don Strayer, Lute Maleki, Slava Turyshev, and Talso Chui Jet Propulsion Laboratory, Caltech	1-18
The Potential OBPR Free Flyer Platform and Fundamental Physics	Ulf Israelsson Jet Propulsion Laboratory, Caltech	1-43
Workshop Program of Talks		1-53

Chapter 2 Gravitation and Relativity Physics

Testing the Equivalence Principle In an Einstein Elevator: Detector Dynamics and Gravity Perturbations	E. C. Lorenzini, I.I. Shapiro, M. L. Cosmo, J. Ashenberg, Harvard-Smithsonian Center for Astrophysics G. Parzianello, University of Padova V. Iafolla, and S. Nozzoli, Institute of Space Physics (Rome, Italy)	2-2
Engineering Developments for The Primary Atomic Reference Clock in Space (title only)	David Brenza Jet Propulsion Laboratory, Caltech	2-22
Measurement of Aberration of Gravity Using Jupiter's Motion (abstract)	Edward B. Fomalont National Radio Astronomy Observatory	2-23
Science Goals of the Primary Atomic Reference Clock in Space (PARCS) Experiment	N. Ashby University of Colorado	2-24

Chapter 2 Gravitation and Relativity Physics (Cont'd)

Improving the Accuracy of Lunar Laser Ranging Tests of Gravitational Theory: Modeling and Future Directions	James G. Williams, Slave Turyshev, and Jean Dickey Jet Propulsion Laboratory, Caltech	2-37
The Multipole Structure of Earth's STEP Signal	Kenneth Nordtvedt Northwest Analysis	2-38
General Relativistic Theory of the VLBI Time Delay in the Gravitational Field of Moving Bodies (abstract)	Sergei Kopeikin University of Missouri-Columbia	2-44
Experimental Investigations of the electromagnetic vacuum: Can we weigh the vacuum? (title only)	Lute Maleki Jet Propulsion Laboratory, Caltech	2-45
ISLES: Probing Extra Dimensions Using a Superconducting Accelerometer	Ho Jung Paik, M. Vol Moody, and Violeta A. Prieto-Gortcheva University of Maryland	2-46
Microwave Cavity Clocks on Space Station (abstract)	J. A. Lipa, J. A. Nissen, S. Wang, D. A. Stricker, and D. Avaloff Stanford University	2-55
The Laser Astrometric Test of Relativity (LATOR) Mission	Slava Turyshev, Michael Shao, Jet Propulsion Laboratory, Caltech and Kenneth Nordtvedt, Northwest Analysis	2-56
Bound on Lorentz and CPT Violating Boost Effects for the Neutron (abstract)	Ronald Walsworth Harvard-Smithsonian Center for Astrophysics	2-75
Tests of Lorentz and CPT Invariance in Space	Matthew Mewes Indiana University	2-76
Prospects for an Improved Measurement of Experimental Limit on G-dot	Alvin J. Sanders University of Tennessee	2-87

Chapter 3 Laser Cooled Atomic Physics

Fermion Superfluidity	Kevin Strecker, Andrew Truscott, Guthrie Partridge, Ying-Cheng Chen, And Randy Hulet Rice University	3-2
Compact Femtosecond Laser-based Optical Synthesizer for Precision Measurements and Atomic Clocks in the Optical Domain (title only)	Scott Diddams and Leo Hollberg NIST-Boulder	3-25
Experiments with ultracold quantum-degenerate fermionic lithium atoms	Wolfgang Ketterle Massachusetts Institute of Technology	3-26
New Experiment to Measure the Electron Electric Dipole Moment (abstract)	Melanie Kittle University of Texas, Austin	3-31
Universal Dynamics of a Strongly- Interacting Fermi Gas	Michael Gehm Duke University	3-32
Fast Rotating Scalar and Multi- Component Bose Gases (abstract)	Tin-Lun (Jason) Ho Ohio State University	3-51
Microgravity Electron Electric Dipole Moment Experiment with a Cold Atom Beam	Harvey Gould Lawrence Berkeley National Laboratory	3-52
Evaporative Cooling in a Holographic Atom Trap (abstract)	Raymond Newell University of Wisconsin-Madison	3-56
RACE and Calculations of Three- Dimensional Distributed Cavity Phase Shifts	Ruoxin Li and Kurt Gibble Pennsylvania State University	3-57

Chapter 4 Biological Physics

Probing Gravitational Sensitivity in Biological Systems using Magnetic Body Forces	Karine Guevorkian, Sam Wurzel, Mariana Mihalusova, and Jim Valles Brown University	4-2
The interaction of positively-charged ions with nucleic acid systems (abstract)	Lois Pollock Cornell University	4-20

Chapter 5 Low Temperature Condensed Matter Physics

Numerical studies of properties of confined helium	Efstratios Manousakis Florida State University	5-2
Theoretical Analysis of Thermodynamic Measurements near a Liquid-Gas Critical Point (abstract)	M. Barmatz, Fang Zhong, and Inseob Hahn Jet Propulsion Laboratory, Caltech	5-13
Measurement of critical adsorption Of nitrogen near its liquid-vapor Critical point (abstract)	Moses Chan Pennsylvania State University	5-14
Quartz microbalance study of 400-angstrom thick films near the lambda point (abstract)	Moses Chan Pennsylvania State University	5-15
Convection in a Very Compressible Fluid: Comparison of Simulations With Experiments	H. Meyer and A. B. Kogan, Duke University, A. Furukawa and A. Onuki, Kyoto University	5-16
Fluctuations of the Phase Difference Across an Array of Josephson Junctions in Superfluid ^4He (abstract)	T. Chui, W. Holmes, and K. Penanen Jet Propulsion Laboratory, Caltech	5-26
Metglas 2714A for Low Temperature Transformer Core and EMI Filter (abstract)	Hung Quach and Talso Chui Jet Propulsion Laboratory, Caltech	5-27
'Heat from Above' heat capacity measurements in liquid ^4He	R. A. M. Lee, A. Chatto, D. L. Goodstein, California Institute of Technology, D. A. Sergatskov, A. V. Babkin, A. M. Churilov. R. V. Duncan, and T. D. McCarson, University of New Mexico T. C. P. Chui and P. K. Day, Jet Propulsion Laboratory, Caltech	5-28
Specific Heat and Second Sound Measurements with the DYNAMX Instrument (abstract)	Joel Nissen Stanford University	5-51
Nonlinear Dynamics of the Superfluid Transition: What may We learn on orbit? (abstract)	Rob Duncan University of New Mexico	5-52

Chapter 5 Low Temperature Condensed matter Physics (cont'd)

Precise heater controller with rf-Biased Josephson junctions (abstract)	Colin J. Green, Dmitri A. Sergatskov, and R. V. Duncan University of New Mexico	5-53
Vortex Loops at the Superfluid Lambda Transition: An Exact Theory? (abstract)	Gary A. Williams UCLA	5-54
Response of Solid ^4He to External Stress: Interdigital Capacitor Solid Level Detector and Optical Interferometer	J. Fay, Y. Wada, R Matsutomi, T. Elkholy, and H. Kojima Rutgers University	5-55
Measurements of the Coexistence Curve near the Liquid-Gas Critical Point (abstract)	Inseob Hahn Jet Propulsion Laboratory, Caltech	5-63
Thermal Conductivity of Liquid ^4He near the Superfluid Transition in Restricted Geometries (abstract)	Yuanmin Liu Jet Propulsion Laboratory, Caltech	5-64
Low Temperature Microgravity Physics Facility payload for the ISS (abstract)	Don Langford and John Pensinger Jet Propulsion Laboratory, Caltech	5-65
Paramagnetic Attraction of Impurity-Helium Solids	E. P. Bernard, R. E. Boltnev, V. V. Khmelenko, and D. M. Lee Cornell University	5-66
The Low Temperature Microgravity Physics Facility: Progress and Status (abstract)	Melora Larson, John Pensinger, Feng-Chuan Liu, and G. John Dick Jet Propulsion Laboratory, Caltech	5-73
Coalescence of Liquid Drops (abstract)	Weijun Yao Brown University	5-74
A macroscopic realization of the weak interaction (abstract)	Arito Nishimori Stanford University	5-75
Thermally-Driven Josephson Effect (abstract)	Konstantin Penanen and Talso Chui Jet Propulsion Laboratory, Caltech	5-76

Chapter 5 Low Temperature Condensed matter Physics (cont'd)

Progress in Developing a new Field-Theoretical Crossover Equation-of-State (abstract)	Joseph Rudnick, UCLA, M. Barmatz and Fang Zhong, Jet Propulsion Laboratory, Caltech	5-77
Bose Condensation at ^4He Interfaces	E. W. Draeger, Lawrence Livermore National Laboratory, D. M. Ceperley, University of Illinois Urbana-Champaign	5-78
New propagating mode near the superfluid transition in ^4He (abstract)	Dmitri A. Sergatskov University of New Mexico	5-86
Experiments with ^4He heated from above, very near the lambda point (abstract)	D. A. Sergatskov, A. V. Babkin, S. T. P. Boyd, University of New Mexico R. A. M. Lee, California Institute of Technology, and R. V. Duncan, University of New Mexico and Caltech	5-87
A 2-D Piston Effect Solution for the Relaxation in the MISTE Cell (abstract)	Mark Weilert Jet Propulsion Laboratory, Caltech	5-88
Measurement of the Specific Heat Using a Gravity Cancellation Approach (abstract)	Fang Zhong Jet Propulsion Laboratory, Caltech	5-89
